

Jordan Rahman

Backend Software Engineer - Dhaka, Bangladesh (open to remote)

jordan.rahman@example.com | github.com/jordan-demo

SUMMARY

Backend engineer with 4 years of experience designing REST APIs and data-intensive services in Python. Comfortable owning features end to end: schema design, API, tests, CI/CD and production monitoring.

SKILLS

Python, FastAPI, Django, SQLAlchemy, PostgreSQL, Redis, Celery, Docker, AWS (ECS, RDS, S3), GitHub Actions, pytest, REST, JWT/OAuth, Linux, Git, TypeScript, React

EXPERIENCE

Software Engineer - Finlytics (fintech SaaS), 2022-present

- Designed and built a FastAPI service for invoice reconciliation processing 1.2M records/day.
- Cut p95 API latency from 820 ms to 190 ms by adding composite indexes and rewriting N+1 ORM queries as SQL aggregations in PostgreSQL.
- Introduced a Postgres-backed job queue with retries and dead-lettering, replacing ad-hoc cron.
- Raised test coverage of the billing module from 41% to 88% with pytest integration tests.
- Mentored two junior engineers; led code reviews and wrote the team's API style guide.

Junior Backend Developer - ShopNest (e-commerce), 2020-2022

- Built Django REST endpoints for catalogue and checkout used by 80k monthly customers.
- Containerised services with Docker and set up GitHub Actions CI, reducing deploy time by 70%.
- Implemented JWT authentication with refresh tokens and role-based permissions.

PROJECTS

- Open-source contributor to a FastAPI pagination library (cursor pagination support).

EDUCATION

B.Sc. in Computer Science and Engineering - 2020
